DETAILED ACTION

Applicant's amendment of 22 August 2001 is entered. Claims 1-37 are cancelled.

Claims 38-106 are pending.

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

A tacky polymer with monomeric units as in claims 44, 51-68, and 70-77.

A fixing polymer with monomeric units as in claims 78, 80, and 82-88.

Applicant is required, in reply to this action, to elect a single species of tacky polymer and a single species of fixing polymer to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. The following claim(s) are generic: 38-106.

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

4. With respect to the tacky polymer, the diversity of possible monomeric units is such that the only element shared by the resulting polymers is that they are tacky. The monomeric units can be chosen from such monomers as disclosed in claims 44, 51-68, and 70-77. Therefore, the species of tacky polymer are not seen to share a significant structural element.

5. With respect to the fixing polymer, the diversity of possible monomeric units is such that the only element shared by the resulting polymers is that they are can be used to maintain the shape of a substrate. The monomeric units can be chosen from such monomers as disclosed in claims 78, 80, and 82-88. Therefore, the species of fixing polymer are not seen to share a significant structural element.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the species of tacky polymer and an election of the species of fixing polymer to be examined even though the requirement be traversed (37 CFR 1.143).

7. By species is meant a single compound. The compound may be named in any of four ways (or any combination thereof): 1) according to IUPAC standard, 2) by a pictorial representation of the compound, 3) by setting forth the specific chemical group

Art Unit: 1619

that each variable in a Markush group represents, or 4) by naming a claim or an example which itself sets forth a single compound.

8. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in rejection under 35 USC 103 of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
